SHARMARKE MOHAMED IBRAHIM

Computer Engineer & Executive Leader

PROFESSIONAL SUMMARY

Results-driven Computer Engineer blending elite software/AI development with high-stakes international diplomacy. Equipped to architect complex systems (C++, Java, AI pipelines) while simultaneously executing global-scale event logistics, defense sector liaising, and cross-campus community mobilization.

EDUCATION

2022 - 2026

Istanbul Arel University

B.S., Computer Engineering

CERTIFICATIONS

- English: Professional Working Proficiency (Cambridge, 2023)
- Turkish: Professional Working Proficiency (Yozgat Bozok University, 2021)
- Somali: Native / Bilingual
- Clubs: Embedded Systems Club, Programming Club (Hackathon Participant)

ACHIEVEMENTS

- Core: C, C++, Python, Java, PHP, C#.
- Web/Cloud: Laravel, ASP.NET Core, Java Spring Boot, Next.js, Docker, HTML/CSS/JS, RESTful APIs.
- AI & Systems: YOLOv8, OpenCV, MediaPipe, EasyOCR, scikit-learn, AVX2 SIMD.
- Tools: MySQL, Git, Arduino IDE, Visual Studio Code.

GLOBAL LEADERSHIP

2025 – Present | Diplomacy

Executive Governance & State Protocols

- Global Summit Secretariat (Zero Waste Forum): Facilitated VIP operations and administrative coordination for a major UN-partnered summit under the auspices of the First Lady, hosting over 120 international ministers from 183 countries, 8 former heads of state, and 5,000 delegates.
- Defense Liaison (SAHA 2026) & Media Delegate: Operated as an official Mihmandar for Serenas Group, bridging international defense logistics at an aerospace exhibition hosting 74 country delegations and 30,000+ professionals. Secured credentials for TRT World Forum 2025 and TRT NEXT.
- Diplomatic Banquet Host: Directed state-level event protocols (July 2026) and formally presented to the Ambassador of Somalia.
- UASI Executive Council Presidency: Acted as Head of the Executive Council, managing overall student union operations, budgeting, and external relations.

Event Architecture & Grassroots Mobilization

- Inaugural & Second Annual Graduations (2025-2026): Founded and architected the first-ever historical graduation ceremony, then scaled and executed the follow-up academic event to solidify the structural precedent.
- Grassroots Community Integration: Organized large-scale outdoor assemblies and morale events (September 2025) to foster ground-level community brotherhood.
- Bab-iAlem International Student Association: Organized cultural exchange events and assisted in strategic planning to enhance international student experiences (Aug 2022 – july 2024).

Cross-Campus Athletics & National Coordination

- Inter-University Athletic Tournament: Managed logistics, scheduling, and execution of a massive cross-campus tournament mobilizing 8 major Istanbul universities (2026).
- National Team Coordination: Scouted and drafted the official Somali student national team to compete in the Ministry of Sports-backed Uluslararası Istanbul Cup.

PROJECTS

2025

Plate Vision & Drowsiness Detection

- Built vehicle tracking/license plate recognition (YOLOv8, OpenCV, EasyOCR) and a real-time driver drowsiness system comparing YOLOv8 vs. classical EAR.

2025

Multi-Model Data Mining Classification Pipeline

- An end-to-end Python machine learning pipeline using scikit-learn, executing data preprocessing, SMOTE oversampling, and model training/evaluation across algorithms like Decision Trees, Random Forests, Naive Bayes, and Support Vector Machines.

2026

BitPost AI & Cinema Management

- Engineered an AI SaaS infrastructure (Laravel, MySQL, OpenAI) and deployed a containerized ASP.NET Core MVC cinema application via Docker.

2024

Mubarak Marketplace (E-Commerce)

- Built a functional B2B e-commerce platform incorporating user authentication and secure payment architecture utilizing Java and Spring Boot.

2023

Parallel Log Analyzer & C++ Logging Engine

- Engineered a high-performance parallel log analysis and logging architecture utilizing C++, AVX2 SIMD, and lock-free multi-threading concurrency to parse massive datasets concurrently.

2023

Noisy Channel Network Simulator

- Developed a C-language simulator using POSIX multi-threading.
